

Department of Transportation and Infrastructure Renewal

Responsibilities

The Department of Transportation and Infrastructure Renewal provides a transportation network to ensure the safe and efficient movement of people and goods. The department also serves the building, property, and accommodation needs of government departments and agencies and employs professional, dedicated staff to provide top-level customer service.

HIGHWAY PROGRAMS

Highway Programs has two main business areas:

- Maintenance and Operations
- Engineering and Construction

Actual service delivery for both highway construction and maintenance is provided mainly through four districts.

Maintenance and Operations (Highways)

Provides fleet management, compliance services, highway maintenance, and snow and ice control.

Fleet Management

Fleet Management provides for acquisition and disposal of equipment while providing functional and technical support to the districts on repairs and training. Fleet Management provides province-wide service for centreline painting, repair and installation of signalized intersections while maintaining four cable ferries, three self-propelled ferries and one private ferry.

Compliance Services

Compliance Services manages motor vehicle compliance services, provides roadside and mobile weight scales, as well as weights and dimensions, and motor carrier enforcement.

Motor Carrier

The Motor Carrier Division administers a comprehensive license and safety inspection program for all passenger vehicles. The inspection team ensures public passenger carriers are operating safe, clean and reliable vehicles and are operating within the license authorities as granted by the UARB. Public passenger carriers include school buses, coaches, community based operators, commuter services and commercial vehicles.

Maintenance and Operations

Maintenance and Operations provides road information to the general public, providing policies on service delivery for summer, winter road and bridge maintenance, auditing compliance to approved standards while providing functional and technical support to the Districts when required.

Engineering and Construction (Highways)

Provides highway engineering and highway construction services.

Highway Engineering Services

Highway Engineering Services has primary responsibility for delivery of specialized engineering and professional services including highway planning and design, traffic engineering, structural engineering, road safety, and vehicle weights and dimensions policy. Specific business functions include bridge and highway planning and design, management of federal-provincial highway cost-shared agreements, the Provincial Traffic Authority Office, vehicle inspection and equipment standards, driver licensing standards, traffic volumes and collision statistics, and access management programs.

Highway Construction Services

Highway Construction Services governs construction standards and specifications. This section ensures quality control and provides contract management and tendering services.

Engineering, Design and Construction (Buildings)

Engineering, Design and Construction (Buildings) provides architectural, mechanical, and electrical consulting; project management; interior design; energy management; environmental services; structural engineering; and manages construction projects such as court houses, hospitals and schools funded by the Province.

Front Line Service Delivery in the Districts

Actual provision of highway construction services (estimating, quality control and project management) and highway maintenance (summer and winter), as well as access control and permitting are carried out by staff in the four districts.

CORPORATE SERVICES

Policy and Planning

Develops policies related to department services and provides corporate leadership on strategic planning and input into government initiatives. It assesses provincial needs and opportunities for all major modes of transportation and recommends the appropriate measures for government to take in support of these links. This section also oversees safety regulation of short line railways.

Human Resources

Develops, implements, and evaluates a full range of policies, programs, and services which support and assist managers and staff in the safe, efficient, and effective provision of TIR services.

Information and Technology

Supports and enhances the operations of Transportation and Infrastructure Renewal through the effective and strategic use of information and technology which enables the delivery of quality, accessible services to the public.

Financial Services

Provides accounting advice and assistance in the development of programs and services, and in the development of the capital program. Also provides financial coordination, implementation of the annual budget, develops financial policies and procedures, provides implementation of the Operation and Financial Management Information System (OFMIS), and the department's records management system.

Communications and Public Affairs

Ensures that department and government policies and actions are communicated to the public, employees, and media in a timely, accurate and consistent manner.

Health, Safety and Environment

Develops, implements and evaluates a full range of policies, programs and services which support and assist managers in the safe and environmentally responsible provision of services, and promotes a safe and healthy workplace.
